WHY SELECTA MIXX

Energy and intensity

Waveform-derived intensity helps distinguish tracks that share a BPM but feel very different. Normal-time, half-time, and double-time feel can improve ranking without bypassing hard limits.

Build once, recall later

In Template Setup, name the event, choose audience and genres, and save it. LOAD TEMPLATE recalls the setup on the main screen. Unwanted templates can be removed.

Scan and remember

Choose a root folder or drive. Selecta Mixx reads supported files in subfolders and caches metadata and analysis, so unchanged music is not fully rescanned every launch.

Automatic detection

Serato local playback is detected directly and does not require a connected controller. VirtualDJ uses supported history information. Traktor, rekordbox, and djay can use the local bridge or manual track drop.

Same quality rules

Videos must still pass the chosen BPM, key, template, genre, audience, version, and duplicate-title rules. Turning videos on does not weaken musical matching.

Language and exit

Change language immediately in Settings—English, Spanish, Simplified Chinese (Mandarin), Hindi, Japanese, or Korean. The choice is remembered and works offline. The in-app X fully quits Selecta Mixx.

LESS SEARCHING. MORE SELECTING.

A focused companion for club, wedding, corporate, family, and private-event DJs.

Owner beta. Local-library features are available now. Streaming and record-pool functions require provider approval before commercial release.
